SECRITE

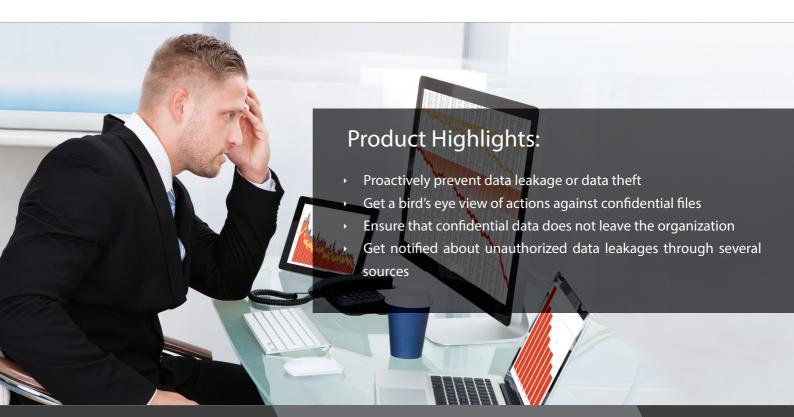

Data Loss Prevention

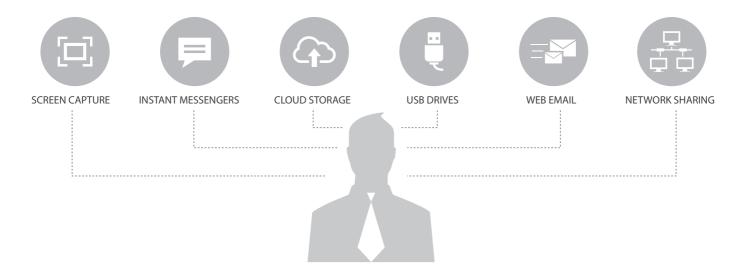

Get complete control over the data that belongs to you.

Seqrite Data Loss Prevention (DLP) allows enterprises to prevent data leakage by regulating various transfer channels. Easy to deploy, this solution protects your intellectual property and ensures policy compliance. DLP can be easily integrated into your existing Seqrite endpoint product for data monitoring, auditing, reporting and prevention of critical information

6 Ways You Can Lose Your Confidential Data

How Seqrite DLP Protects Your Business Critical Data

Business enterprises need effective DLP strategies in place. Hence, segregating between different data types and gauging their individual characteristics is a vital exercise.

Data transferred through web-based applications

Segrite DLP allows enterprises to detect sensitive content across communication channels.

Content Aware Protection

- View all actions against confidential files
- Get notified about unauthorized data leakages
- Ensure that company data and secrets do not leave the organization

Data accessed or transferred via physical devices

Seqrite DLP actively raises alerts whenever crucial files are copied or transferred via USB devices.

Advanced Device Control

- Configure access policies for more than 25 device types
- Block unverified devices
- Prevent Autorun infections

How to Deploy Segrite DLP

Seqrite reduces the cost of data security by integrating DLP features within existing Endpoint Security solutions without requiring any extra hardware.

For Endpoint Security Business Edition users

To acquire DLP, Business Edition users need to buy the Compliance feature pack.

For Endpoint Security Total Edition users

Users of Endpoint Security Total Edition can acquire the DLP pack right away, as the features within Compliance pack are included within the product by default.
